8MM BUTTON

1.6/8MM

LET'S BUILD THIS PRECIOUS!

CHOOSE YOUR GEOMETRY BY ROTATING ARMS

SQUISHED

TRUE X

SORRY

because of the tightness
this step can be painful

INSTALL THE MIDDLE PLATE

we encourage you to remove the stack's pressnuts you'll not use
to avoid contact with your esc components

TIPS

you may need to pull the ends of the arms upwards to insert the long screws.

SCREW TO TIGHTEN ALL

**8MM BUTTON HEAD
SCREW**

TIPS

Screw each screw a little at a time.
You don't need to tighten them until you've screwed down the top plate

INSTALL THE CAM CAGE

**CAMERA MOUNT UPDATE! IF YOUR TPU PARTS DON'T LOOK LIKE THESE, YOU HAVE THE NEW VERSION COMPATIBLE WITH THE 04.
NO WORRIES—JUST FLIP THE BOTTOM SCREWS. 12MM AT THE BACK, 8MM AT THE FRONT.**

Take a 12mm and a 8mm screw.
place the cage, protuberance down,
reinforcement inwards.

Screw in the 8mm screw at the rear.
Screw in the 12mm screw at the front,
stopping before it protrudes inside the
cage.

Place the tpu holder.
Screw in the 12mm screw while
holding the tpu firmly downwards.

Et voilà!
Repeat with the other side.

INSTALL YOUR VTX SLIDER

INSTALL THE SQUARE NUT

SCREW IN !

WALKSNAIL

20x20

use the shorter M2 screws
provided with your vtx

DJI 03

25x25

use our M1.6/8mm screws
preferably on the flat side of
the vtx

OTHERS

you're on your own,
we trust you !

INSTALL YOUR VTX SLIDER

in the right direction,
insert the bottom of the vtx
slider into the slot.
